

# Human-Centered Design Process

## Inspiration

- Conduct research to understand user needs.
- Define user needs and problems.
- Brainstorm potential problems to solve.
- Prioritize problems.

## Planning

- Evaluate and select ideas.
- Create a prototype.
- Test your prototype.

## Iteration

- Refine your idea by addressing any issues.
- Create a new prototype and test it again.
- Redesign or add features until a final solution is reached.
