Objectives

The Bachelor of Science in Nursing (BSN), accredited by the Commission of Collegiate Nursing Education (CCNE)*, is a program designed to develop the professional knowledge and skills of registered nurses. The curriculum builds on a foundation of biological, physical, and social sciences, which contribute to the science of nursing. The liberal arts components enhance the development of the intellectual, social, and cultural aspects of the professional nurse. This baccalaureate program includes behavioral objectives that concentrate on the development of the nurse's role as researcher, practitioner, and leader. Using human caring as a framework, registered nurses are prepared as generalists who are able to apply critical thinking, professional skills, and knowledge to patient outcomes and health care systems.

The Bachelor of Science in Nursing programs at the University of Phoenix are accredited by the Commission on Collegiate Nursing Education <http://www.aacn.nche.edu/ccne-accreditation>.

This program is a post-licensure nursing program designed for nurses with current RN licensure who wish to obtain a bachelor's of science degree in nursing. The program is designed to expand knowledge in the areas of nursing science evidence and theory in order to apply current evidence-based knowledge to increase quality of patient outcomes and health systems. The program targets relevant content to align with many industry standards, which permits graduates to be influential leaders within the nursing profession.

Requirements and Prerequisites

You will need **120** credits to complete this program, which may be earned from a combination of required and elected courses. However, required courses may vary based on previous experience, training or transferable credits. [View general requirements](#).
